

# Castellated Cladding

AliWood Castellated Cladding provides the ultimate batten style feature wall or ceiling lining without the need to install individual battens. Once installed the boards create the image of 50mm wide by 20mm deep timber battens. The interlocking boards which give a 150mm cover are quick and easy to install requiring fixings at only 600mm centres and can be fixed directly to your framing or top-hats.

The system is complete with various trims and flashings to give the ultimate finish and is designed to be used in both commercial and residential situations. Installed horizontally or vertically, the system delivers a natural stylish look with plenty of flair. The AliWood Castellated Cladding system is ideal but not limited to fire prone areas, housing, sheds and feature walls....anywhere you would use timber. The unique AliWood Cladding has a Patent pending.

## Applications
